Address 65 rue de Saint Brieuc, 35042 Rennes Cedex

About the organizers

Green Food Tech is primarily an initiative of research members of the Institute of Nutrition and Functional Foods (INAF) – Université Laval, (Quebec, Canada), working in the field of sustainable food.

Held every two years, this fourth edition is the first to be organised internationally, thanks to close collaboration with French researchers from INRAE, Rennes and Université de Lille.

About The Event

The GreenFoodTech international conference was initiated 6 years ago by the INAF (Institute for Nutrition and Functional Foods) and Université Laval as well as the CRIBIQ (Consortium for Research and Innovation in Industrial Bioprocesses in Quebec) in Canada.

After three successful editions in Canada (2018 (Quebec City), 2021 (remote), 2023 (Montreal)), GreenFoodTech is broadening its global outreach and the conference is coming to Europe !

This fourth edition of GreenFoodTech will take place in Saint Malo (France) the 9th to 11th of April 2025. It is co-organised by the National Institute of Research for Agriculture, Food and Environment, INRAE and the University of Lille (with the *Science and Technologie du Lait et de l'œuf unit* (STLO) in Rennes, and BioEcoAgro unit, in Lille) in France, as well as INAF and University Laval, in Canada,

Event Purpose

Its aim is to bring together the key players of the food sector (research, industry and government) to discuss scientific and technological advances dedicated to sustainable food processing, producing emerging, healthy and nutritional foods and ingredients, and reducing losses and waste.

Event Schedule

APR
9

General schedule

GreenFoodTech 2025 will bring together academics and industry for 3 days to present recent scientific advances and promising avenues for sustainable food.

The program should include more than thirty conferences, around 25 'Flash' presentations and a large number of posters.

APR
11

Session themes

This year's event will feature the traditional conference sessions: **Reducing food losses and waste; Advances in green food technologies; Processing and production of safe and healthy food and emerging food ingredients.**

In addition to these themes, GreenFoodTech 2025 will focus on **artificial intelligence and machine learning for food processing, as well as assessment of the sustainability of food systems using multi-criteria methods.**

**Interested in becoming an
Green Food Tech 2025
partner?
Or interested in a booth?**
